SECTION 1 — EXECUTIVE SUMMARY

Media classified as likely synthetically manipulated based on 12 forensic indicator(s), including 4 high-severity finding(s).

Legal routing rationale: Active electoral candidate under MCC in Demo Lok Sabha Constituency (Shri Demo Politician). Deepfake indicators exceed evidentiary threshold. Deepfake grounds: Audio–video lip movement is misaligned, consistent with synthetic dubbing or post-hoc voice replacem; Spatial facial inconsistencies detected across frames suggest GAN or deepfake-based facial manipulat; 3D face mesh landmarks are unstable across the temporal sequence, indicating inconsistent facial geo

3. GROUNDS FOR DEEPPFAKE CLASSIFICATION

Summary: Media classified as likely synthetically manipulated based on 12 forensic indicator(s), including 4 high-severity finding(s).

- **Audio-Video Sync (CRITICAL):** Audio–video lip movement is misaligned, consistent with synthetic dubbing or post-hoc voice replacement rather than naturally captured speech. (lip_sync_alignment_error_ms: 135.0 ms)
- **Facial Manipulation (HIGH):** Spatial facial inconsistencies detected across frames suggest GAN or deepfake-based facial manipulation. (spatial_cnn_manipulation_probability: 92.00%)
- **3D Face Geometry (MEDIUM):** 3D face mesh landmarks are unstable across the temporal sequence, indicating inconsistent facial geometry typical of synthetic faces. (face_mesh_landmark_variance: 0.0750)
- **Synthetic Voice (HIGH):** The voice track exhibits characteristics consistent with text-to-speech or neural voice cloning rather than a live recording. (tts_synthetic_probability: 88.00%)
- **Voice Authenticity (MEDIUM):** Pitch contour and spectrogram features do not match natural speech patterns for the apparent speaker, suggesting audio synthesis or splicing. (spectrogram_pitch_mismatch_ratio: 39.00%)
- **Anti-Spoofing (HIGH):** Anti-spoofing neural network assigns low confidence to bona fide speech, indicating the audio is likely non-genuine or heavily processed. (anti_spoofing_nn_confidence: 11.00%)
- **Lighting Consistency (MEDIUM):** Lighting on the face and background shifts unnaturally between frames, suggesting compositing or generative synthesis rather than a single capture. (illumination_inconsistency_score: 71.00%)
- **Shadow Geometry (MEDIUM):** Shadow direction and softness are inconsistent with the scene light source, a common artifact in deepfake and face-swap videos. (shadow_geometry_inconsistency_score: 66.00%)
- **Color Grading (MEDIUM):** Skin tone and color grading do not remain consistent across frames; color boundaries and shadows appear imperfect relative to natural video. (color_grading_anomaly_score: 59.00%)
- **Temporal Stability (MEDIUM):** High-frequency flicker and temporal instability detected at facial boundaries, consistent with frame-wise generative manipulation. (temporal_flicker_score: 55.00%)
- **Facial Boundaries (MEDIUM):** Visible artifacts at the jawline, hairline, or face perimeter suggest blending of a synthetic face onto an original body. (facial_boundary_artifact_score: 62.00%)
- **Analyst Observation (MEDIUM):** Dummy run: lip-sync mismatch; inconsistent lighting and shadows on face.

4. DECLARATION & SWORN OPINION

I, Dr. Authorized Forensic Examiner, do hereby certify that the electronic record described above was subjected to multi-modal deepfake analysis on validated forensic models. It is my technical opinion, to a high degree of

certainty, that the media exhibits synthetic artifacts characteristic of generative artificial intelligence impersonation. This certificate is issued under the authority of Section 79A of the Information Technology Act, 2000 for production as electronic evidence.
