

Cyber Crime First Information Report (Draft)

Offences: BNS §319 (Cheating by Personation), §336 (Forgery of electronic records), §356 (Criminal Defamation)

Subject media SHA-256: b43ea392960d67ed418657ff6b61399cfd641e2996a67b22bf7291cf159049b

Identified / declared person: Subject Under Investigation (source: user_override)

Grounds for Deepfake Classification

Summary: Media classified as likely synthetically manipulated based on 7 forensic indicator(s), including 4 high-severity finding(s).

- Audio-Video Sync (critical):** Audio–video lip movement is misaligned, consistent with synthetic dubbing or post-hoc voice replacement rather than naturally captured speech. (*lip_sync_alignment_error_ms: 149.8 ms*)
- Facial Manipulation (high):** Spatial facial inconsistencies detected across frames suggest GAN or deepfake-based facial manipulation. (*spatial_cnn_manipulation_probability: 90.41%*)
- 3D Face Geometry (medium):** 3D face mesh landmarks are unstable across the temporal sequence, indicating inconsistent facial geometry typical of synthetic faces. (*face_mesh_landmark_variance: 0.0998*)
- Synthetic Voice (high):** The voice track exhibits characteristics consistent with text-to-speech or neural voice cloning rather than a live recording. (*tts_synthetic_probability: 99.85%*)
- Voice Authenticity (medium):** Pitch contour and spectrogram features do not match natural speech patterns for the apparent speaker, suggesting audio synthesis or splicing. (*spectrogram_pitch_mismatch_ratio: 49.94%*)
- Anti-Spoofing (high):** Anti-spoofing neural network assigns low confidence to bona fide speech, indicating the audio is likely non-genuine or heavily processed. (*anti_spoofing_nn_confidence: 0.12%*)
- Analyst Observation (medium):** Auto-generated from BharatShield detection. CNN=0.9041, FFT=0.9985, Verdict=Fake
