3. FORENSIC DEEPPFAKE ANALYSIS SUMMARY

Visual Manipulation Probability	88.47%
Voice Synthetic Probability	1.47%
Forensic Recommendation	Immediate registration of FIR and service of takedown to intermediary

4. GROUNDS FOR DEEPPFAKE CLASSIFICATION

Summary: Media classified as likely synthetically manipulated based on 5 forensic indicator(s), including 3 high-severity finding(s).

- **Audio-Video Sync (CRITICAL):** Audio–video lip movement is misaligned, consistent with synthetic dubbing or post-hoc voice replacement rather than naturally captured speech.
- **Facial Manipulation (HIGH):** Spatial facial inconsistencies detected across frames suggest GAN or deepfake-based facial manipulation.
- **Voice Authenticity (MEDIUM):** Pitch contour and spectrogram features do not match natural speech patterns for the apparent speaker, suggesting audio synthesis or splicing.
- **Anti-Spoofing (HIGH):** Anti-spoofing neural network assigns low confidence to bona fide speech, indicating the audio is likely non-genuine or heavily processed.
- **Analyst Observation (MEDIUM):** Auto-generated from BharatShield detection. CNN=0.8847, FFT=0.0147, Verdict=Fake
